PROJECTS

CS Airlines Life On Earth

Project Manager and Developer

- Develop comprehensive project plans outlining objectives, timelines, milestones, and resource requirements.
- Actively monitor project activities, anticipating and addressing issues as they arise to prevent delays or setbacks.
- Utilize Git and GitHub repository for version control, allowing for efficient tracking of code changes.

Life On Earth

Backend Developer

- Spearheaded the design and prototyping of a demo application for the "Life on Earth" project using Figma.
- Documented the design decisions, user flows, and key features of the demo application, facilitating knowledge transfer within the team.
- Created interactive prototypes within Figma, allowing team members to visualize the flow and functionality of the demo application.

SKILLS

Java HTML Python C++ Application Development

Mathematics

Career Objective

With a robust foundation in computer science and cybersecurity, complemented by proficiency in tools like Wireshark and a deep understanding of security frameworks, I am eager to pursue a challenging role as a Cybersecurity Specialist. Seeking to leverage my skills to fortify digital defenses, I am enthusiastic about contributing to cutting-edge cybersecurity measures. Committed to staying abreast of evolving cyber threats and utilizing my computer science expertise, my goal is to ensure the creation and maintenance of a secure and resilient digital environment.
